## OWL

**Cinema Rear/Side  
Bipole/Dipole Switchable**

## ONWALL

Our new BiPole/Dipole Switchable On Wall Surround Speaker is such a natural, it even named itself ONWALL!!

This long awaited home theater product delivers the dynamic and natural sound quality you will need to match a Meadowlark front stage!

The Owl is dynamic and open, is capable of big output, and has surprisingly satisfying bass.

On board each Owl is a forward firing array and a rearward firing array, each consisting of a woofer and tweeter pair. A high current toggle peeks out of the bottom of the cabinet to allow easy switching from bipole to dipole mode. Each array even has its own dedicated crossover made from the same high quality parts we use in our other models and is, of course, point to point soldered by hand.

The same heavy, gold plated binding posts used on the Kestrel are recessed into the rear for easy access and smooth wire routing

The Owl is available in either black or white and includes a convenient, heavy duty wall mounting system.

A clever cabinet design allows for simple and easy substitution of fabrics by the owner to match decor, and for easy painting to match wall color.

We build the Owl right here in our beautiful, new plant in Northern New York. We are very proud to say that our entire crew has been involved in the design and planning of this new product and is very eager to build your pair!

Basic specs:

driver complement: two 5.25" woofers, two 1" fabric dome tweeters  
dimensions: 14W x 21H x 6D  
impedance: 4 Ohms  
sensitivity: 92dB 2.83V 1M (bipole mode)  
bandwidth 50Hz - 20Khz (bipole mode)
